## Collaborating Like in the 90's

Most customers will agree that their favorite feature in their BI System is the "Export to Spreadsheet" feature. While Spreadsheets don't provide the same level of functionality as full blown BI solutions, they provide a simpler way to take reports and spread them around for collaboration with people inside and outside the firewall. While very convenient, sharing spreadsheets with corporate data brings with it some challenges that are killing the "one version of the truth" concept in BI.

Once the initial export to spreadsheet takes place, a spreadsheet with data is created. The biggest issue lies in the fact that the spreadsheet is disconnected from the data source and can be manually modified. A single spreadsheet can then be shared with multiple people via email creating duplications, or even worse, several versions of the same spreadsheet but without the same data.

### Results:

- ▶ A few people use the BI tools while most users use Spreadsheets and PDF files
- ▶ Those users get a static report that can't be analyzed in powerful ways
- ▶ There are no ways to manage the spreadsheet environment
- ▶ Many versions of spreadsheets kill the vision of "one version of the truth"
- ▶ No ability to provide real time collaboration among users and partners

## Panorama NovaView™ SharedViews

### Bringing New Ways of Collaboration & Reporting to Business Intelligence

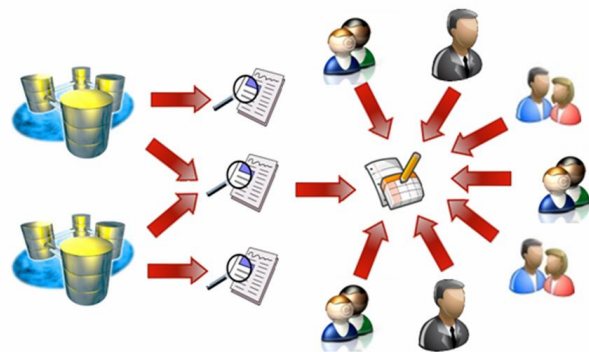

Panorama has partnered with Google and developed a new way to share and collaborate with BI data and spreadsheets in a significantly more collaborative and controlled way.

Panorama NovaView SharedViews is a feature that enables users and organizations to perform real-time collaboration with people inside and outside the firewall as well as publish information to suppliers and partners in a more streamlined and controlled fashion. The published reports are then displayed in any web browser using a unique and intuitive flash user interface that enables real time collaboration and full interaction.

Novaview SharedViews offer your organization significant benefits:

- ▶ Make a popular spreadsheet based collaborative process more streamlined and controlled
- ▶ Make BI more accessible for users inside and outside the organization
- ▶ Publish and share reports with your employees
- ▶ Share and collaborate with vendors, suppliers or partners
- ▶ No more static reports. Share live data with internal & external users
- ▶ Centralized sharing location
- ▶ Provide real time collaboration

### Panorama NovaView SharedViews

Panorama Novaview SharedViews was built in partnership with Google and delivers the ease of use and web capabilities that are popularly associated with Google. Panorama Novaview extends Google Apps to allow the owner of a report to share his analysis and conclusions with other users.
